

GEIH - Green Energy Innovation Incubators

2023 09 20

MAIN ACTIVITIES OF THE PROJECT

Developing a user-friendly IT-based tool (web app) that will enable long-term collaboration between municipalities, experts, and stakeholders from Lithuania and Turkey to address climate change and energy transition innovations.

Creating an easily accessible and comprehensive database focused on energy and the environment. This database will contain information about relevant partners, policies, funding opportunities, and applications related to the EU Green Deal and energy transition.

Organizing an events to promote the developed IT tool and the database. The campaign will target the specific audience of the project and aim to increase their awareness and understanding of the benefits and functionalities of the tool.

PROJECT OBJECTIVES

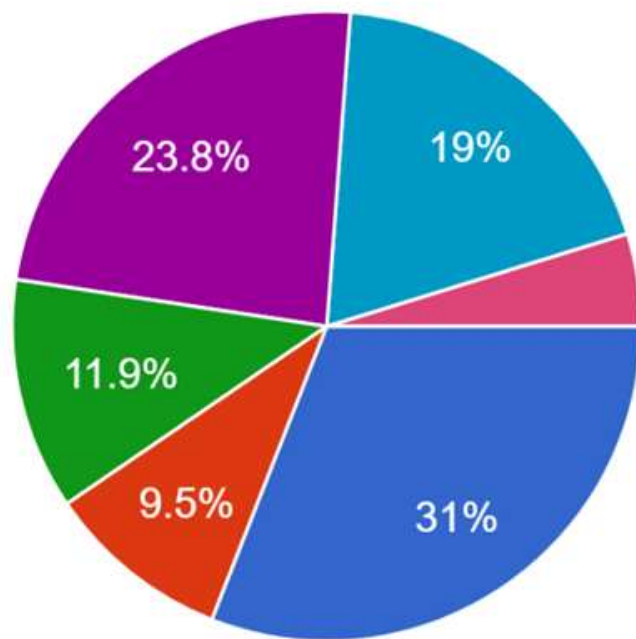

1. Develop IT-based tool enabling long-term cooperation for climate change, energy transition between Lithuanian and Turkish municipalities and experts

2. Create a publicly available database on energy and environmental. Partners and relevant policies, calls for project financial attraction, application development to facilitate future cooperation in EU Green Deal, energy transition

3. Organize an awareness raising campaign about the developed IT tool and database aimed at reaching the target group of the project

What type does your organization belong to?
